■# IBI Bank — Final Deliverables Inventory

Project: Banking and Digital Transaction Management System

System: IBI Bank — International Bank of India

Course: BTY39105

Database: fintech_banking_db

1. Application

• Source code: project root, `Backend`, and `Fronted`

• Backend API: Node.js and Express

• Database connectivity: MySQL

• Frontend directory is intentionally named `Fronted`

• Preserve the working application source; do not include `Backend/.env` in public materials.

2. SQL Query Collection

Location: `Database/PBL_SQL`

• `01_basic_select_queries.sql`

• `02_aggregate_group_by_queries.sql`

• `03_join_queries.sql`

• `04_subqueries.sql`

• `05_correlated_subqueries.sql`

• `06_dashboard_report_queries.sql`

• `07_transaction_demo.sql`

• `08_advanced_sql_inventory.sql`

The advanced inventory inspects existing objects. It is not a replacement for their CREATE definitions.

3. Documentation

Location: `Database/PBL_Submission/Documentation`

• `data_dictionary.md`

• `normalization_document.md`

• `relational_schema.md`

• `sql_deliverables_index.md`

• `testing_report.md`

• `individual_contribution.md`

• `final_submission_checklist.md`

• `final_deliverables_inventory.md`

Before submission, confirm that team names, student IDs, institution, faculty guide, and contribution statements are accurate.

4. ER Diagram and Screenshots

• ER diagram: `Database/PBL_Submission/Documentation/ER_Diagram.png`

• Screenshot evidence: `Database/PBL_Submission/Screenshots`

The screenshot collection contains application evidence for the homepage, login/verification, customer dashboard, accounts, transactions/transfers, beneficiaries, loans/EMI, admin dashboard, customer management, and admin reports. Check screenshots for personal or confidential data before sharing.

5. Presentation and Report

• Presentation: `Database/PBL_Submission/Presentation/Presentation.pptx`

• Main report: `Database/PBL_Submission/PDF_Documentation/PBL_Report.pdf`

• Supporting PDFs: `Database/PBL_Submission/PDF_Documentation`

Open the final PDF and presentation to confirm they render correctly. The main report must be checked for required academic details, ER diagram, database design, implementation, testing evidence, conclusion, and references.

6. Database Export

The export found during the project audit is:

`Database/PBL_Submission/Exports/ibi_bank_complete.sql`

Verify the exact filename before packaging. Update other documents if they refer to a different filename.

The SQL export contains schema and data. Follow institutional rules before sharing it and remove sensitive records if required.

7. Final Packaging Checks

• Confirm the main report and presentation open.

• Confirm all required SQL files and the database export are included.

• Confirm screenshots and ER diagram are included.

• Include actual test results and real academic details.

• Verify the final ZIP contains no `.env` files, credentials, passwords, OTPs, JWTs, or other secrets.

• Include repository or deployment URLs only if they genuinely exist and are required.
