■# IBI Bank — SQL Deliverables Index

Database: fintech_banking_db

Query files

File	Purpose
01_basic_select_queries.sql	Basic SELECT statements
02_aggregate_group_by_queries.sql	Aggregate functions and GROUP BY
03_join_queries.sql	JOIN examples
04_subqueries.sql	Subquery examples
05_correlated_subqueries.sql	Correlated subquery examples
06_dashboard_report_queries.sql	Banking dashboard and summary reports
07_transaction_demo.sql	Transaction control demonstration
08_advanced_sql_inventory.sql	Inventory of database objects and indexes

Existing database objects to include in the final evidence

Views

• vw_account_details

• vw_fund_transfer_details

• vw_loan_emi_summary

• vw_transaction_history

Stored procedures

• sp_account_transaction_history

• sp_customer_account_summary

Function

• fn_calculate_monthly_interest

Triggers

• trg_account_balance_audit

• trg_validate_transaction_amount

Finalization notes

• Keep the SQL source files together in Database/PBL_SQL.

• Include the actual CREATE VIEW, CREATE PROCEDURE, CREATE FUNCTION, CREATE TRIGGER, and index definitions in the final database export or a separate schema-objects script.

• Ensure the submitted definitions match the database being demonstrated.

• Do not assume the inventory script recreates these objects; it is intended to inspect them.

• Do not include credentials, tokens, real OTPs, or production customer information in public submission files.

• Record actual query outputs and test results in the report.
